Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int findFloor(int arr[], int low, int high, int x)
{
    if (low > high)
        return -1;

    int mid = (low + high) / 2;
    if (arr[mid] == x)
        return arr[mid];

    if (arr[mid] < x)
    {
        int result = findFloor(arr, mid + 1, high, x);

        if (result == -1)
            return arr[mid];

        return result;
    }

    return findFloor(arr, low, mid - 1, x);
}

int main()
{
    int n, x;

    scanf("%d", &n);

    int arr[n];

    for (int i = 0; i < n; i++)
    {
        scanf("%d", &arr[i]);
    }

    scanf("%d", &x);

    int result = findFloor(arr, 0, n - 1, x);

    printf("%d", result);

    return 0;
}
